Art Unit: 1797

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6, 9 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Ash (US Patent No. 5,919,369).

Regarding claims 1-6, 9 and 11, Ash teaches a plasma exchange waste liquid purification and circulation dialysis apparatus (HFD) which filters out plasma and pass it through sorbent bag (101) i.e. purifier or adsorption separator and recycle purified plasma back to HFD as dialysate solution and HFD is used as dialyzer (see figures 4, 7; col. 11, line 50 – col. 16, line 12). R

Note that the recitations of “wherein plasma exchange waste liquid separated...to remove harmful substances contained in the plasma” in claim 1, “used in a simple plasma exchange therapy” in claim 2 and “used in a double-filtration plasma exchange therapy” in claim 3 are intended use. It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art

apparatus satisfying the claimed structural limitations. Ex parte Masham, 2 USPQ2d 1647 (1987).

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patent No. 5,744,042 teaches plasma filter in combination with dialysis apparatus.
